

Tackling the big drought

Like earthquakes, monsoons, and tornadoes, we think of drought as something that happens to other people, in other places. Not this year. Beginning last fall, Massachusetts has seen below-average precipitation every month except February, with almost no rainfall at all in the summer months, especially in the eastern half of the state.

By August, many rivers had dropped to historic lows, and tributaries around the state had dried up, as did several mainstem rivers, such as the Ipswich and parts of the Parker. The dry riverbeds wrought havoc on plant and wildlife, with the drought blamed for fish kills, turtles deaths, and even botulism in ducks. Groundwater tables also fell to dangerous levels, threatening water supplies in some areas. Farmers suffered substantial crop losses.

While we can't prevent droughts, we can improve the way we manage water in a drought. This became very clear this summer, as the state environmental agencies seemed to have been caught unprepared by the length and severity of this drought. By the time the Baker administration got the message out to towns that they should impose additional water restrictions, the opportunity for significant summer water conservation - which could have lessened the effects of this drought - was largely lost.

Despite extreme drought in parts of the Commonwealth, outdoor watering restrictions are voluntary for many communities across the state. Until the governor declares a "Drought Emergency," the state lacks the authority to impose mandatory uniform watering restrictions for communities affected by drought. As a result, we are left

with a confusing patchwork of restrictions, imposed town-by-town, difficult to enforce. It's too little, too late.

THE GOOD NEWS is that both legislators and members of the administration recognize that the state's current Drought Management Plan is inadequate. This summer, together with our member groups, Mass Rivers advocated vigorously for improved drought management. We are now working

with policymakers to update the plan so that environmental protection is an integral part, water conservation requirements are triggered earlier in a drought, and outdoor watering restrictions are imposed more uniformly across the affected region. Climate change scientists tell us we will be seeing more of these droughts in the future, so we need to get this right.

OCTOBER, 2016
From the Director

STRONGER TOGETHER: MAKING RIVERS GREAT AGAIN

Wow, what a year. The Mass Rivers Alliance came together repeatedly to protect our rivers, and – it worked!

First came Governor Baker’s executive order directing state agencies to review regulations to make sure state protections

did not exceed those of the federal government. Our members went to work reviewing regulations, attending public listening sessions, weighing in with letters and emails and speaking up for strong protection for rivers, streams, wildlife, and wetlands. After the dust settled this spring, we saw no significant weakening of important protections.

Next, the governor proposed a state takeover of the federal water pollution control program, and again we sprung into action. Noting that current state water quality programs are severely underfunded, and concerned that this change could harm water quality, we opposed it. Our members across the state wrote letters, made phone calls, testified on Beacon Hill, and met with their elected representatives. Our legislators listened, and the legislation didn’t progress this year. Next year we hope to work with legislators and the administration to instead restore funding for existing, critical programs, like water quality monitoring, assessments, facilities inspections, compliance, and enforcement.

Just when we thought we’d earned a little rest....along came the worst drought our state has experienced in 40 years. Our members around the state told us their streams had dried up, a disaster for wildlife. Dismayed by the state’s slow (and inadequate) response to this crisis, we organized once more. We urged state leaders to declare a severe drought in eastern Massachusetts and asked residents to stop watering their lawns (they did). The Boston Globe and other media covered the story and helped get the message out. We’re now working with legislators and the administration to improve the state’s response to future droughts.

None of this could have happened without an active group of smart, passionate advocates – we’re proud to claim 63 member organizations (including two in RI – we’ve gone national!). And we could not do this without the generous support of you, our contributing members. Our members – organizations and individual supporters – are the greatest. Thank you.

Julia

Feds keep control of water pollution regulatory powers (for now)

Mass Rivers and our member groups successfully opposed a bill this spring that would have been the first step toward shifting control to the state for regulating water pollution in Massachusetts. Should this effort eventually succeed, water pollution controls - and the cost of the program - will pass from the United States Environmental Protection Agency (EPA) to the Massachusetts Department of Environmental Protection (MassDEP).

We had several concerns about this proposal. The first is that MassDEP's current water programs are woefully underfunded and inadequate. These include monitoring and assessing water quality, inspecting water treatment facilities, and enforcing compliance with the Clean Water Act. We would like to see the state commit the necessary resources to these basic water quality programs before taking on a big new responsibility.

Second, the proposed mechanism for funding the new program is unsustainable and insufficient. MassDEP suggested adding a new line item to its budget which we know from past experience is extremely vulnerable to cuts. In fact, MassDEP has seen numerous budget cuts over the past few years, losing about one-third of its staff since 2008. Additionally, the amount requested was \$3-5M less than past funding estimates to run the program.

Finally, we are concerned that the impetus to take over water pollution control from the feds may be to reduce town budgets at the expense of the environment. Regulating the management of municipal stormwater and wastewater is a major part of the program currently run by EPA. Proponents for state control claim that the shift from the EPA will result in potential cost-saving measures for towns. Many of the strongest supporters for state control have been involved in ongoing legal disputes with the EPA over water pollution enforcement. We are concerned that the result of moving control from EPA to MassDEP in the current environment could harm water quality.

Mass Rivers and many of our member organizations came together this spring to communicate these concerns to legislators and members of the administration. We advocated for a "fix it first" approach to shore up MassDEP's struggling water quality programs.

Unfortunately, this year's budget shortfall made that a difficult ask. However, we were pleased that our legislators listened to our concerns and determined the proposed bill was not ready for action by the legislature.

We would like to extend a big thank you to our many members who worked with us on this issue this year. We would also like to thank Senator Gobi, Representative Schmid, Senator Eldridge, Representative Dykema, and the other members of the Joint Committee on Environment, Natural Resources, and Agriculture, who took the time to listen carefully to our concerns, and educate themselves about water pollution regulation. We expect this issue to come back and we look forward to working to keep the protection of our rivers in the forefront next session.

New faces at Mass Rivers

We're growing! On June 1, Policy Specialist Gabby Queenan joined our staff. A recent graduate of Macalester College with a BA in Environmental Studies and Political Science, Gabby brings to her job a passion for rivers and a talent for policy. We were delighted that a grant from the Foundation for Metrowest enabled us to bring back Susan Beede (our former Policy Director) to work on a project to help Mass Rivers member organizations use the new Water Management Act regulations to help protect their local rivers. David Antos, our summer intern and senior at the University of Maryland, researched state and federal water pollution programs across the country.

Save the date for our Annual Meeting on December 7th!

Guest speaker: President of the Wilderness Society, **Jamie Williams**
Call of the Wild: Protecting wild places in an era of partisan politics

Please join us for the Massachusetts Rivers Alliance's 2016 Annual Meeting and dinner on **Wednesday December 7th, 6-9pm** at the First Church in Belmont. We are shaking things up this year with a new venue and a presentation by **Jamie Williams**, a national conservation leader, to talk to us about protecting nature's special places in a very fractious political landscape.

This year we will also be honoring the outstanding work and dedication to our rivers by **EkOngKar (EK) Singh Khalsa**, former ED of the Mystic River Watershed Association and **Kathy Baskin**, former Director of Water Policy for the Commonwealth.

Event details and tickets are available on the Mass Rivers website (massriversalliance.org) Questions? Call Elissa Grad at (857) 445-0208.
