The RIVER Advocate

HEALTHY RIVERS FOR PEOPLE AND WILDLIFE

SPRING 2022

Massachusetts Rivers Alliance

Mass Rivers' mission is to protect and restore rivers across the Commonwealth.

Board Officers

Mark P. Smith, *President*
Emily Scerbo, *Vice President*
Andrea Franz, *Treasurer*
Paul Beaulieu, *Clerk*

Board Members

Anna Aguilera, Wayne Castonguay, Ian Cooke, Christine Doyle, Mary Griffin, Nancy Hammett, Nagesh Mahanthappa, Deirdre Menoyo, Heidi Ricci, Ellen Smith, Eve Vogel

Staff

Julia Blatt, *Executive Director*
Danielle Dolan, *Deputy Director*
Katharine Lange, *Policy Specialist*
Sarah Bower, *Technical Specialist*
Gretchen McClain, *Operations and Membership Manager*

Get outside with Mass Rivers!

EXPLORE YOUR RIVERS If you haven't already, check out the "[Explore Your Rivers](#)" section of our website for a guide to enjoying rivers all over the state. Not a paddler? No worries! You can find information about hiking trails, bike paths, and even public transportation near your favorite river – or a river you've never explored. Massachusetts is rich in rivers, and

Learn about Massachusetts' waterways, how to safely enjoy them, and the local organizations working to protect them.

Click on a river below to find information on swimming, paddling, boating, fishing, and walking/biking opportunities in the watershed!

(in our humble opinion) they are the reason our state is so beautiful. So if you're worn out, tired, a little down from, you know, all of it...go outside and explore a river!

END-OF-SUMMER CELEBRATION

September 11. It's not too early to get this event on your calendar! We had such a good time last year, we're doing it again – food truck, music, beer and wine, boating, raffles and awards at Hale Res-

ervation in Westwood. Bring your family and friends, celebrate our shared achievements, and support the rivers! We look forward to seeing you there!

Helping our member organizations keep streams flowing

As a small organization, we can do the most good for the greatest number of rivers when we work at the state level, on policies, budgets, laws, and regulations that affect many rivers across the Commonwealth. But those laws and policies are carried out watershed by watershed, river by river, and sometimes small stream by small stream. Our member organizations, spread out across the state, are often on the front lines when it comes to making sure their rivers get the protection they deserve.

This is especially true for the Water Management Act, which governs municipal water allocations. As climate change increases the frequency and severity of droughts in Massachusetts, protecting the sustainability of both rivers and water supplies will become critically important. The Water Management Act authorizes MassDEP to grant users 20-year permits (and 10-year registrations) to withdraw water for use as municipal water supply or other commercial, agricultural or industrial uses. The law's regulations also provide opportunities for MassDEP to require that these water users decrease their harm to the environment in various ways, such as requiring water users to look for less-damaging water supply sources, creating stormwater recharge to replace

water lost to aquifers and streams, or increasing water use restrictions during periods of low streamflows.

Because it can be difficult for our member organizations to navigate this law's complicated regulations, Mass Rivers started a technical assistance program in 2021 to help them. Since the middle of last year, Mass Rivers' Technical Specialist Sarah Bowers has been working in partnership with several groups across the state to protect streamflow through this program, including the Sudbury, Assabet, and Concord, the Charles, the Parker, and the Taunton Rivers.

Water use permits are renewed every 20 years, and they're being renewed right now! This is a once in a two-decade opportunity for local groups to get involved and advocate for stronger, more protective permit conditions for our watersheds. Our recent assessment of the 60 permits that have been renewed thus far suggests that permits need significant improvement to uphold the goals of the updated regulations, promulgated in 2014, to maintain healthy watersheds and improve degraded ones.

For more information on our Technical Assistance Program, please contact Technical Specialist Sarah Bower (sarahbower@massriversalliance.org).

SPRING 2022

Mass Rivers staff in Hingham

From the Director

If you take even a quick glance at the Annual Report we send you each year, you'll notice that Mass Rivers' biggest expense, by far, is its people. We are now thrilled to be a five-person staff, guided by a 15-person board, connected to eighty member organizations, and supported by over a thousand donors. Together, we are a community of people who care about rivers and water, and the important role they play in our lives and the wildlife around us.

As we grow and redefine how we do our work, the context and working conditions have changed, presenting us with new challenges. First, we are facing, as we are all facing, the reality of climate change acceleration. This makes our

work, and the work of our many partners and members, all the more urgent. Second is of course, Covid. Three of our staff were hired during the pandemic. Two joined our organization as we were all learning to work remotely. With the exception of occasional staff hikes, we worked together for many months without in-person contact.

Yet our staff adapted – brilliantly. They quickly figured out Zoom, and enabled us to offer virtual programming, almost from the start of the pandemic. They learned our issues, created strong working relationships with our partners, and figured out how to do their jobs, creatively, and well. They gently and tactfully suggested ways we could do things better. I believe that one of the silver linings to disruption is often a flowering of creativity, and our staff and board rose to that challenge in ways large and small. During the past two years we've connected hundreds of people through our "Mass Rivers Connects," program for organizational members; supported members protecting stream flow in local rivers through our new technical assistance program, launched the popular bi-weekly "River News and Notes," and presented "Art in the Flow," a six-part series featuring artists inspired by nature. And of course, we continued to work remotely with the state legislature and administration on bills, budgets, and policies so as not to lose ground while the pandemic felt like it was here to stay. We are currently hard at work on a new stormwater technical assistance program, which we expect to launch by the start of the summer.

Mass Rivers' strength is in its people. We have always been fortunate in our staff and our board, our partners, and our loyal, generous supporters. The pandemic has tested us and – so far – we've been able to keep going, stronger than ever. I don't know what the future holds, but I wanted to take a moment here to thank and appreciate our small but mighty staff – Danielle Dolan, Katharine Lange, Sarah Bower, and Gretchen McClain – for rising to the unusual challenge of the past two years, while staying focused on our work of protecting and restoring our state's rivers, and strengthening and connecting our growing community of member organizations.

This newsletter highlights some of this work. Thank you for supporting our initiatives to protect the state's water quality, stream flow, wildlife habitat, and to strengthen climate resiliency. We couldn't do it without you.

Julia

POLICY CORNER

Bills on the move, gubernatorial briefing, and more.

In February our two priority bills advanced out of the Joint Committee on Environment, Natural Resources, and Agriculture. We reached this milestone because many of you spoke up for rivers and contacted your legislators in support of stronger policies for rivers - thank you! The drought bill would give the state the authority to require water conservation during droughts, and is now in the Senate Ways and Means Committee. The invasive species bill would strengthen the state's invasive species management program, with additional support and funding for communities struggling to control both aquatic and terrestrial invasive species; this bill is now in the House Ways and Means Committee. Look for advocacy opportunities from Katharine via email and on social media - we need your help to keep these bills moving!

Katharine and Danielle are working with a coalition of environmental advocates to brief gubernatorial candidates on our state's most pressing environmental issues before the November election. Our role is to ensure that water - its importance, and all the ways the next governor can help promote water sustainability, stream health, and climate resilience - is well represented in the briefing.

On the federal front, we are tracking the significant funding investments approved by Congress - through the American Rescue Plan Act (ARPA) and the Bipartisan Infrastructure Law (BIL) - and engaging where we can to secure some of these resources for protecting and improving our rivers and streams. In February, roughly 50 individuals from our member organizations attended our webinar on the subject, with speakers from MassDEP, EPA, and the Mystic River Watershed Association.

Mass Rivers gets a Deputy Director!

Mass Rivers was delighted to welcome Danielle Dolan, our new Deputy Director, at the end of January.

Danielle's portfolio includes managing our policy and technical programs, developing new programs, expanding our partnerships, and growing foundation support for our work. She brings broad experience in environmental justice and climate resilience work, and her most recent position was with the Local Government Commission, in California, where she managed a team focused on statewide water management and policy.

Danielle earned her Bachelor's in Environmental Studies from Hawai'i Pacific University and her Master's in Community Development, with an emphasis in Water Policy and Water Management, from University of California, Davis. She is also a certified science teacher and Master Naturalist. Her diverse experience brings a cross-cultural awareness to all her work, and lays the foundation for a deep professional and personal commitment to the interconnected issues of equity, diversity, inclusion, and environmental justice.

Danielle is originally from Massachusetts, and she is excited for the opportunity to work on river protection and restoration in her home state.

Mass Rivers members enjoy the End-of-Summer Celebration at Hale Reservation last September

Connecting the Community – again!

Mass Rivers’ dual mission includes both protecting and restoring rivers *and* connecting and strengthening our community of river advocates. To us, these two goals are inextricably linked, because, “we are stronger together,” and...stronger, more connected member groups are more effective at accomplishing their goals.

To this end, we initiated a program in the spring of 2020 called “Mass Rivers Connects,” to bring our organizations together regularly, to share ideas, and support

Mark Lindhult, Swift River, New Salem

each other during a difficult time. We began this as a virtual program at the start of the pandemic, thinking the need and interest would wane as time went on and we returned to what we fondly thought of as “normal.” After a year of convening five groups virtually each month, we cut back on the program in 2021. We heard from many groups, however, that they missed having these meetings. So, in 2022 we re-booted, with groups led by four different staff, with separate meetings for Executive Directors, Scientists, Outreach and Communications Specialists, Very Small (but Powerful) Organizations, and Fundraisers. These lively discussion groups are open to our organizational members’ staff, board members, and volunteers.

Mass Rivers is also pleased to offer occasional workshops, panel discussions, and other information sessions for both organizational and individual members. We recently hosted a panel of experts on federal infrastructure funding, and will be presenting three new short films on river challenges and solutions, along with an interview with the filmmakers, in mid-April.
